

WHAT IS CLAIMED IS:

1. An apparatus for fixing a bobbin to a printed circuit board for use in a transformer, around an upper portion of the bobbin being wound a coil, a lower portion of the bobbin being provided with a plurality of pins connected to an end of the coil and connected to the printed circuit board of an electronic product, the apparatus for fixing the bobbin to the printed circuit board comprising:

a receiving hole formed in the printed circuit board, a size of which is minutely larger than that of the bobbin to hold the bobbin; and

a horizontal support portion formed at the pins of the bobbin in parallel relation to an upper surface of the printed circuit board, for allowing the bobbin to be supported on the upper surface of the printed circuit board when the bobbin is inserted into the receiving hole.

2. The apparatus for fixing the bobbin to the printed circuit board for use in the transformer of claim 1, further comprising a fixing portion extending from the horizontal support portion in a perpendicular relation to the upper surface of the printed circuit board so that the pins are inserted into an opening formed in the printed circuit board.
